CMB Mission	Constraining Power $\left\langle \frac{\Delta \pi_{\ln R_{\text{reh}}}}{\Delta \mathcal{P}_{\ln R_{\text{reh}}}} \right\rangle$	Average Reduction of prior volume
Planck2013	1.66	40%
LiteBird _{HI}	3.68	73%
Prism _{HI}	8.58	88%

Summary

- Future CMB missions could detect gravitational waves down to $r \sim 10^{-3}$
- High resolution surveys would measure the scalar running
- In the hardest to disambiguate situation, number of ruled out models increases from 1/3 to 3/4
- Reduction of the reheating prior volume increases from 40% to 73% (LiteBird) or even to 88% (Prism)
- Reheating now matters!
